REMOTE HUSTLE – STAGE 1 TASK
CYBERSECURITY & TECH SECURITY
PRACTICAL SECURITY IMPLEMENTATION SOLUTION

Name:- Ashogbon Ayomikun Abdulazeez
Participant ID:- AD010001
Date of Submission:- 22nd of February, 2026.

1. Password Security Policy & Enforcement Plan

Develop a professional password security policy that includes:

- Minimum password length:- 8 Characters
- Complexity requirements:- Must include at least one uppercase letter, one lowercase letter, one number and one special Character(e.g $,!,@,.,#,&.)
- Password rotation guidelines:- Enable Multi Factor authentication e.g fingerprint, Face recognition.... Change password only when you notice there's a threat to your account, Change password and restrict access if any employee leaves the Organization
- Prohibition of password sharing:- sharing of credentials via Chat, mail, is highly prohibited
- Recommended password management approach:- Make use of Password managers for storing and generating credentials

Additionally:

- Provide three examples of strong passwords:
  1. !JudgeMe483$
  2. w&U4xC$70eFj
  3. ZRXzjMT$S34j&dAi

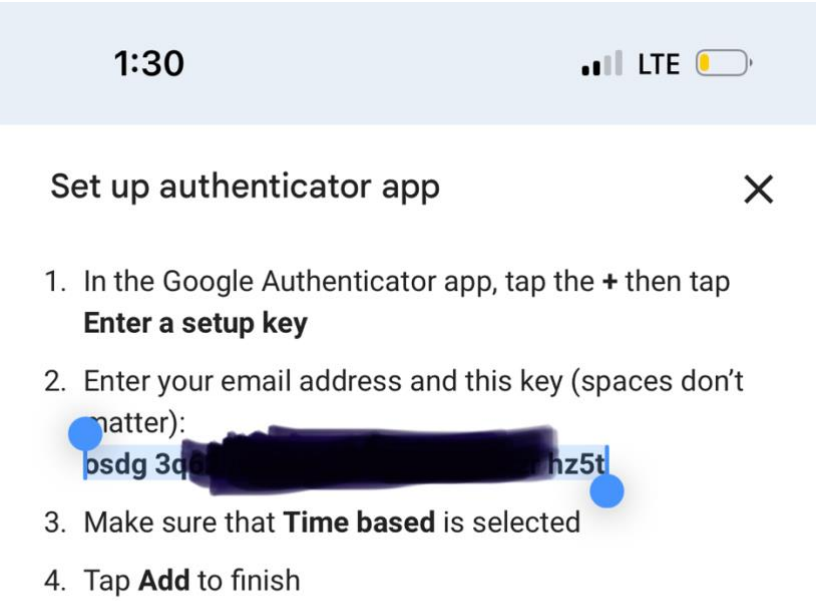
- Briefly explain secure password storage best practices:-
  1. Make use of encryption (e.g sha256)
  2. Enable biometrics or MFA locks on password manager app

2. Two-Factor Authentication (2FA) Implementation

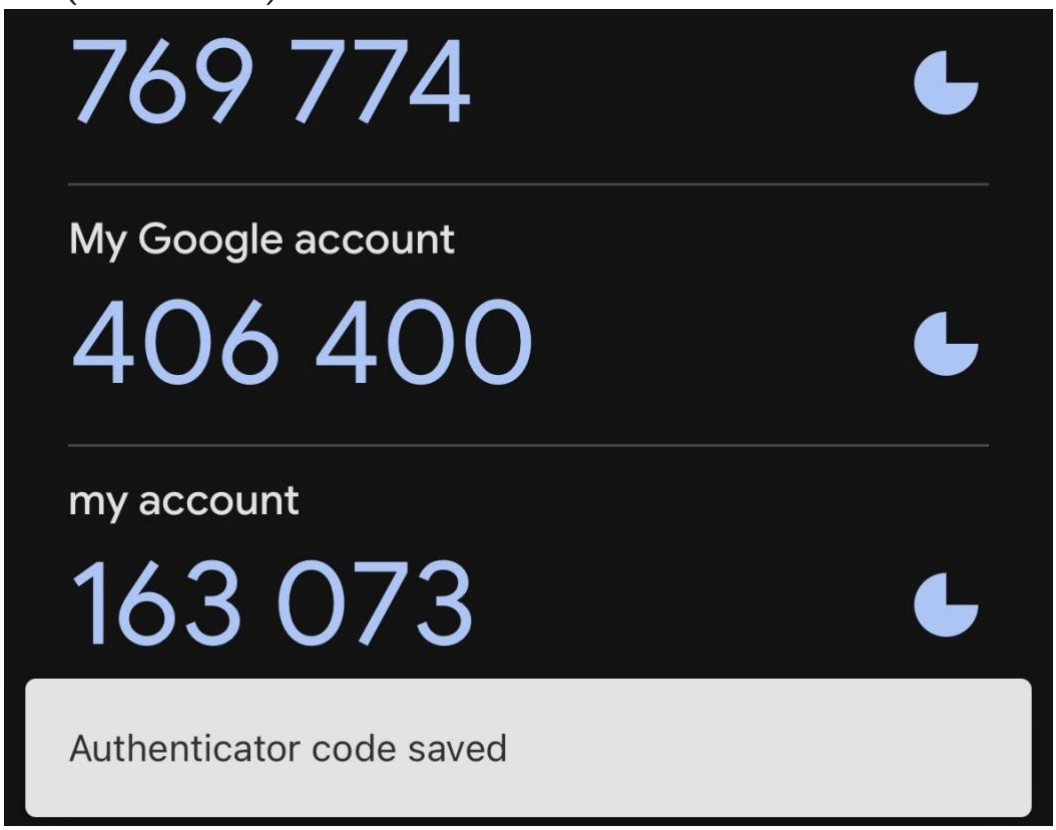
Method:- Google Authentication App

Step-by-step Activation process

I. Opened my Gmail account app, then selected the account I want to implement the 2FA on then I tapped on manage your Google account,I then tapped on Security and sign-in, then navigate 2-step verification, then Click on set up authenticator, then I saw the QrCode but i decided to use key to sign in so I used "can't scan it option then a key was generated for me.

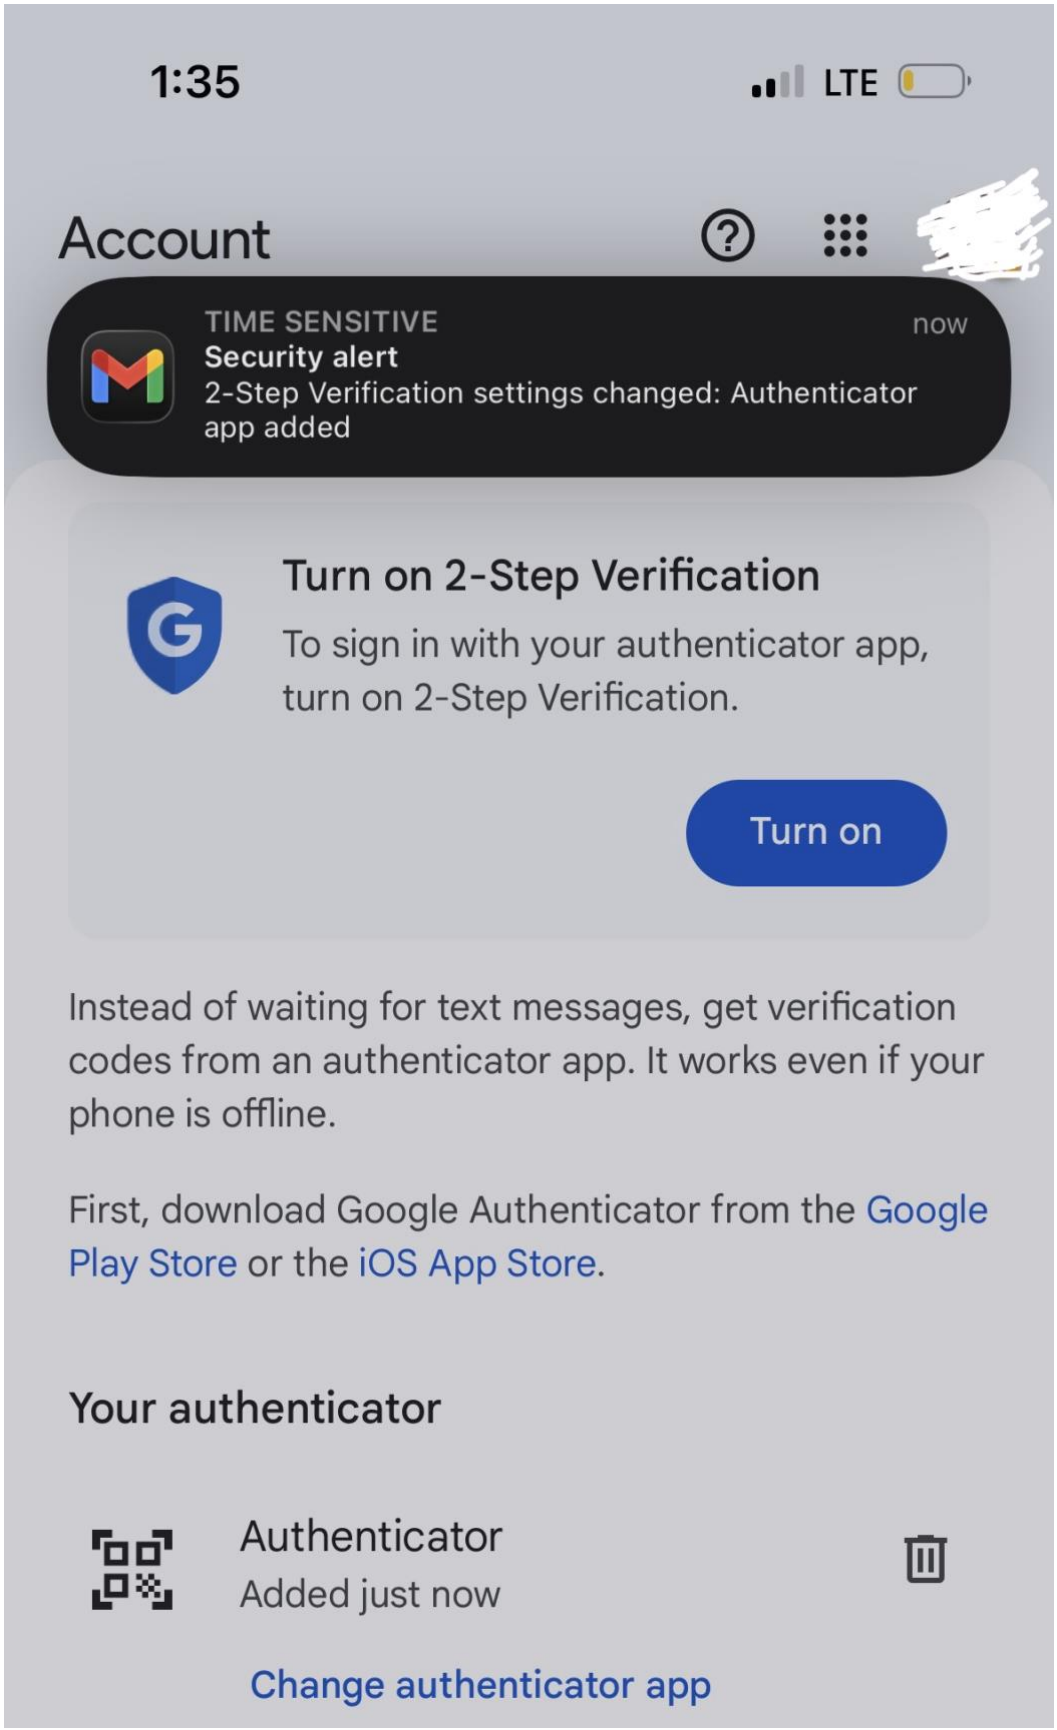


II. Then i opened my Google Authenticator app, then clicked on the plus sign "+" at the left bottom of my screen, then clicked on enter a setup key, then it asked me to put account name, The key, and type of key, I input the account name, key given to me and chose the type (time based) then I clicked add.



III. Then I went back to my Google app then clicked next, after clicking it the next page then asked me to input a code from my

authentication app, then I did, Then it shows it has added successfully.



Risk reduction benefits:-

1. Mitigate credentials theft:- Even if attackers steal your password they can't login with out Time based token.
2. Account protection:- provide a second barrier that is harder to bypass than password

3. Access Control Framework

Department	View Access	Edit Access	Administrative Privilege	Approval Authority
HR	Employees profile and payroll	Personal contact and leave request info	No Admin privileges	HR Director
Developers	Technical Documentation and source	Developer environment	Full control over sandbox environments	Tech Lead
Finance	Financial report, Tax Documents	Accounts payable, Invoice, Ledger	None	CFO
Marketing	Brand Guidelines	Social media accounts, campaign assets	Website Admin	Marketing Manager
Admin	Entire Company	All Database	Full system	CEO
